

BO-480

Boiler Neutralizing Amine

Items	Specifications
Form	Liquid
Color	Clear
PH value	>12
Specific gravity (20°) g/cm ³ ≥	0.99-1.00
Composition	Morpholine & Octadecylamine
Odor	Slight Amine

General Specifications

BO-480 is a high performance mixed neutralising amine scientifically formulated for the treatment of steam boilers and other boiler systems.

BO-480 comprises a solution of volatile amine used to neutralise the acidic carbon dioxide content of steam condensate.

BO-480 contains a blend of Octadecylamine and morpholine. The total amine content is 25%.

BO-480 extends the life of condensate pipework by retarding the rate of 'grooving' by acidic condensate.

Key Features and Benefits

- High performance mixed neutralising amine
- Used to neutralise acidic carbon dioxide content of steam condensate
- Extends life of condensate pipework
- Retards rate of 'grooving' by acidic condensate

Application and Dosage

Dose **BO-480** at 1.2 ppm per 1 ppm of total alkalinity in make up.

The dose rate for **BO-480** will depend on the level of condensate return. Dose **BO-480** in proportion to feed water flow by means of a positive displacement pump.

Maintain a condensate pH of 8.0 – 9.0.

Packing

BO-480 is available in 200 kg barrels.
