

CO-325D Open Recirculation Cooling dispersant

Items	Specifications
Form	Liquid
Color	Clear, Colorless
PH value	3-5
Specific gravity (20°) g/cm ³ ≥	1.05-1.15
Freezing point	-4 °c
Odor	Slight
Viscosity (25°) CP	50-100

General specifications

CO-325D is a high performance multi-functional cooling water dispersant designed to be used in conjunction phosphate treatment programs.

CO-325D is scientifically formulated as a supplemental multi-functional dispersant for use with phosphate treatment programs to prevent the formation of associated scales.

Key Features and Benefits

- High performance multi-functional cooling water treatment
- Excellent supplemental cooling water dispersant
- Ideal for the prevention of scales when used with phosphate treatment programs
- Convenient liquid product

Application and Dosage

Treatment and dosage for **CO-325D** is normally dosed to maintain 30-60 ppm in the system.

CO-325D Polymeric Dispersant is compatible with other commonly used treatments and can be dosed from the same mixing tank.

Packing

CO-325D is available in 200 kgs HDPE jars and barrels.
